NEWS RELEASE

Accelerating DoD Human Performance Optimization for Warfighters, CHAMP Human Performance Resource Center Chooses tiag® for Software Development and User-Centered Design Expertise

RESTON, Va., December 6, 2018 – As a preferred provider of software development and user-centered design expertise, **tiag®** was awarded a new, year-long prime contract to provide software development expertise and user experience design for the **CHAMP** (Consortium for Health and Military Performance) **Human Performance Resource Center** (HPRC).

As part of DoD's Uniformed Services University of the Health Sciences (USU), CHAMP HPRC is an online, one-stop source of evidence-based information and resources to help warfighters and their families achieve total fitness and human performance optimization (HPO).

Incorporating the best practices of user-centered design and innovation, tiag will leverage its agile development team of UI/UX strategists, designers, software developers, testers and quality assurance specialists, and Drupal developers to create an entirely new design for the HPRC website, as a key aspect of CHAMP's overall educational effort.

"We are honored to support CHAMP in this initiative to facilitate communication and collaboration for all HPO communities of interest," says tiag Executive Director Arthur "Charlie" Doutt.

Doutt notes that the new site will capture user interest while providing quick easy access to evidenced-based HPO information, along with physiological, cognitive and socio-emotional resources for specific topic areas — among them, physical and mental fitness, nutrition, environment, family and relationships.

In addition to translating cutting-edge information and providing resources, strategies, tools, apps and videos for numerous domains related to the maintenance, optimization and enhancement of human performance in training and on the battlefield, tiag's work will help drive traffic to the CHAMP HPRC site while expanding CHAMP's sphere of influence within DoD.
